

New Module PDMS Model Shots

This sequence of 3D CAD model shots was prepared in PDMS and shows:

1. New 1000 Te process module
2. Brownfield platform modifications
3. Installation of module to offshore installation

The key takeaway from this is to illustrate the powerful communication that is done visually. Compared to reading text people assimilate visuals more than 3000 times faster.

These days model shots and fly through videos can be easily and cost effectively created from the base 3D model. Worth considering for your next project !
